

UML Class

Summarized by AI - July 21, 2025

Generated by @Prateek

The **UML Class** document outlines a comprehensive approach to managing a rental system, emphasizing the dynamic interaction between renters and vehicles. **Key insights** include the necessity for efficient resource management to meet customer demand and maximize operational success. The document also details a structured project management process, starting with a thorough examination of project requirements and strategic planning. **Implementation** follows, ensuring tasks align with goals, and concludes with an evaluation of outcomes against objectives. This approach not only highlights the importance of availability and resource allocation but also provides valuable feedback for future improvements.
